Meet the Patient: Platform Data Protection

Clareon Collection, RANZCO 2026. Watch This Space, 29 September 2026. Supplement to Meet the Patient: Data Handling (16 September 2026). Describes the data-protection position of the EU-hosted real-time avatar platform shortlisted for the live version.

1. Scope

This document sets out how session data is handled by the shortlisted avatar platform, drawn from the platform provider's published governance, privacy and contract documents. The provider's wording is quoted where it matters and each source is linked in section 8. The Data Handling document of 16 September covers what Watch This Space captures and how Alcon's content is held; this document covers the platform layer only.

2. What the platform does

The platform generates the patient's face, lip-sync and expression in real time from audio. The provider owns and trains those avatar models. It does not own or train the language model, speech recognition or voice components; the customer selects those providers, so each part of the chain is identifiable and can be assessed on its own terms. The language model layer used by Watch This Space runs on an API platform with SOC 2 Type 2 certification that does not use customer data for training by default.

3. Training

Customer session content is not used to train the provider's models or any third-party model. From the provider's AI Governance page and Privacy Policy:

> "Anam does not use customer session content to train CARA or third-party foundation models unless this is separately agreed in writing and carried out under the customer's instructions."

Watch This Space will not agree to any such use. Alcon's patient stories, the no-go list and the conversations on the stand stay outside every training set.

4. Hosting and region

Production inference and media are hosted on CoreWeave in Spain (EU) and US East. Enterprise customers select the region and one of two region policies. Under the provider's "strict" policy, processing stays in the selected region and the platform returns an error rather than failing over to the other region; under the "preferred" policy it may fail over. For this activation the configuration is EU, strict. The provider notes that region selection applies to session content and not to its website, account, support or billing systems, and that a contractual data-residency commitment requires Zero Data Retention to be enabled.

5. Retention and deletion

Zero Data Retention is available at persona or session level. When enabled, the provider does not persist transcripts, user audio, text-to-speech text, language model prompts and responses, or session recordings after the session ends; only operational metadata for billing and security remains. Without it, recordings are held up to 30 days and session reports until deleted by the customer. For this activation Zero Data Retention is enabled for every consult. The transcript used for the post-show report is captured on the Watch This Space side, not retained by the platform, and is deleted on the date Alcon sets.

6. Certifications and contract

Item	Provider position
Security assurance	SOC 2 Type II report; HIPAA-aligned controls. Report and sub-processor list available through the provider's Trust Center. Watch This Space will obtain both and supply them to Alcon before go-live.
Contracting entity	ANAM.AI LTD, United Kingdom, company number 15214363, as processor. Customer as controller.
Purpose limitation	Processing limited to providing the service and generating the interactions the customer configures.
Sub-processors	Listed publicly. Fourteen days' notice of changes, with a right to object.
Breach notification	Without undue delay on confirmation of a personal data breach.

Termination	Return or deletion of customer personal data on instruction; data beyond technical reach is placed beyond use.
Audit	Annual audit right on 14 days' notice; SOC 2 Type II or ISO 27001 reports accepted in place of on-site audit.
International transfer	UK ICO International Data Transfer Addendum and Standard Contractual Clauses.

7. Status

The platform is shortlisted, not contracted. Final selection follows voice and accent testing in the first two weeks of the project. Every candidate is assessed against the same conditions: no training on customer content, confirmation of that in writing, EU or US hosting, deletion on request. The platform selected will be documented for Alcon in this form before any patient content is loaded to it.
